

# MANUFACTURING? SAVE UP TO 18% ON YOUR COST PER PART.

Typical enhancements to Diamond wheel bonds **IMPROVE PERFORMANCE BY 10-15%** or more. In a recent survey, **76% OF CUSTOMERS** are still using diamond wheels that were developed 3 years ago or longer. Statistics show that your **COST PER PART** could be as much as **18% HIGHER** if the wheel has not been optimized.

If you have been using the same wheel specification for **MORE THAN 18 MONTHS**, it is likely that you are **NOT GRINDING AS FAST** as you could and your cost per part is higher than it should be.

Using our proprietary **BOND DEVELOPMENT PROCESS** ( B.D.P. ), each wheel formulation is analyzed and enhanced on an 18 month cycle ensuring wheels are manufactured with the most technically advanced bond systems available. You will never be grinding with old technology with **EAGLE WHEELS**.

*"I wouldn't trust any other wheel to run lights-out on our new Anca machine."*

*"I used the 180 grit wheel yesterday for the first time and I must say that it grinds cooler than any wheel I have used ever and it has increased my production by 30%."*

*"I designed a tool program, set up the new wheel with the parameters we discussed. With my hand on the E-Stop, I let it rip. This wheel is amazing. It has turned my grinder into a whole new machine."*

*"Best Damn wheel I have used!"*
