

HOW DO I GET BETTER PERFORMING DIAMOND WHEELS?

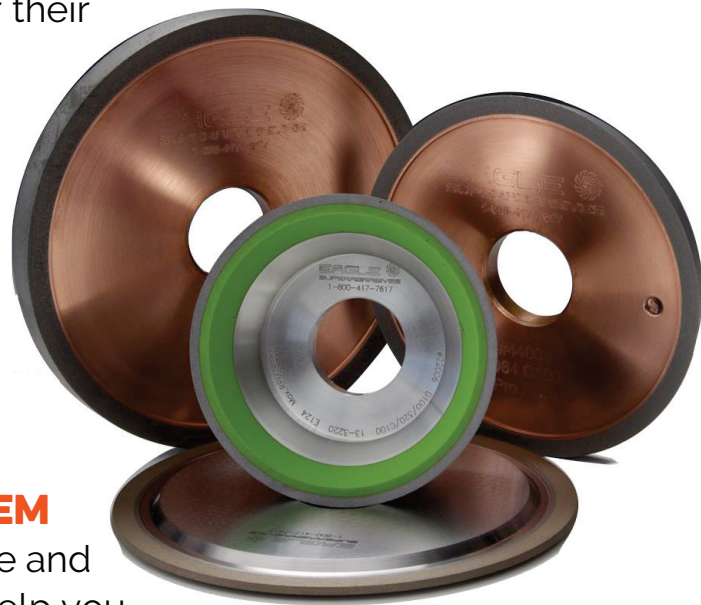

Only **28%** of companies have a person that keeps written statistics on the performance of their wheels.

Only **8%** of those companies also have a set step-by-step performance and evaluation process for their wheels.

Did you know that typically every 18-24 months, technology improvements increase wheel performance by as much as **15%**.

If you have not had each wheel designed specifically for the application, why? If it doesn't cost you anything to do this, why wouldn't you ?

Using our **WHEEL OPTIMIZATION SYSTEM (WOS)** we will take each wheel one at a time and using our step-by-step evaluation process, help you develop the wheel for optimal cost per part. Best of all - it's **FREE**. We keep the records for you and we help you develop the grinding process that saves you money.

"I've never seen wheels last this long"

we are getting about 50% more parts between dresses.

Sorry for my order frequency dropping, your wheels are too good!

"I used the 180 grit wheel yesterday for the first time and I must say that it grinds cooler than any course wheel that I have used ever and it has increased my production by 30%"

Your wheels outperformed the competitors wheels by 62%. We were also having breakage issues with every 4th wheel, now totally eliminated.
