

# NEW DP-1 BOND FOR THERMAL COATINGS

Maintaining and working with virtually indestructible Thermal Spray coatings and other super hard materials is a challenging task. The best material to use for grinding thermal spray is the hardest known—*diamond*.

Specifically designed for thermal spray coatings, our **DP-1 BOND** performs under the extreme stresses caused by grinding such a hard material. These wheels will provide the rapid stock removal and surface finish you need while maintaining a cost effective, efficient grinding solution.

Our diamond wheels not only meet industry standards, but easily exceed them. We often out-perform our competition 3 to 1.

How? Quite simply, our wheels are formulated specifically for the application and not a generic off-the-shelf product.

.....

**EAGLE SUPERABRASIVES** has quickly established itself as a leading supplier of diamond grinding wheels to the mining and downhole drilling industry. Whether the application is for grinding hard face, thermal spray coatings, buttons or inserts, gate valves, gage bricks—or any other task that calls for high performance diamond wheels—we are here to help. Give us a call for a quotation on a DP-1 Bond wheel for your Thermal Spray application!
