

INDUSTRIAL SUPPLIERS, ARE YOU PROVIDING YOUR CUSTOMERS WITH THE LATEST IN DIAMOND WHEEL TECHNOLOGY?

Are your customers keeping up with newer wheels?

- ▶ If your customers have used the same wheel specification for more than 18 months, they probably aren't grinding as fast as they could.
- ▶ Slower cycle times increase cost per part.
- ▶ If your customers' wheels haven't been optimized, their cost per part could be up to 18% higher.

Eagle's Bond Development Process ensures your customers' wheels stay ahead of the curve.

- ▶ Each wheel formulation is analyzed and enhanced on an 18-month cycle.
- ▶ This process ensures wheels are manufactured with the most technically advanced bond systems available.
- ▶ Your customers will never have outdated grinding technology with Eagle wheels.

What industrial suppliers say about Eagle:

"Eagle Superabrasives made a huge impact on our business through the development of a custom wheel. We were able to satisfy the customer in terms of cost, service and quality. Most importantly, we strengthened our relationship with the customer, which in turn led to a number of new business opportunities. We've since ordered other products from Eagle and they've always exceeded expectations."

- Wes P., **Fastenal**
